

Azure Cloud Foundation

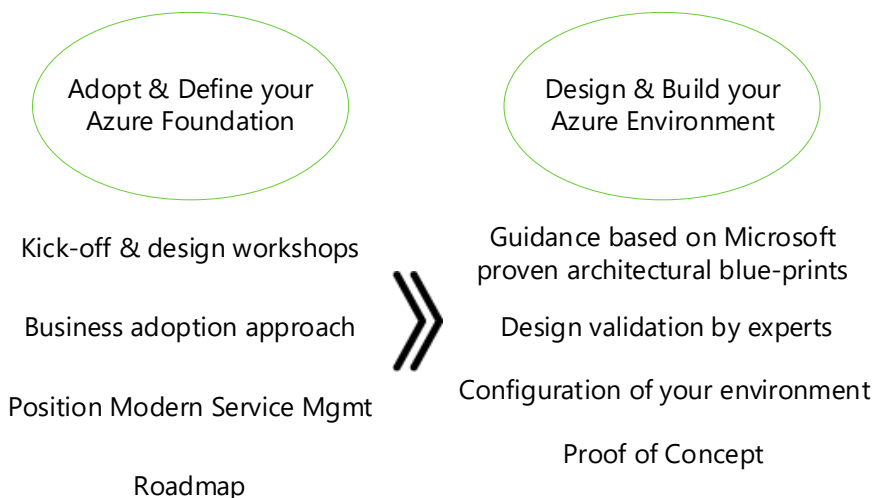

Secure by design, compliant via automation

ItnetX has created an approach to onboard customers in the cloud. With the large experience in assisting enterprise customers in their journey to the cloud we can provide guidance on best practices and present a complete program that fits your needs.

To begin your journey on the Azure platform, a solid foundation is needed to start adding building blocks on top of it. We define standards for subscriptions, rights management, naming conventions, network connectivity on Azure, security and management services (includes monitoring, backup, ...). Within the foundation we define your service catalog items and make sure that the implementation of the cloud environment is done in a controlled way which makes each item compliant and secure by design.

To facilitate this, itnetX has created an approach to guide customers in the cloud adoption.

Plan your first Azure Cloud Foundation workshop today and send a request to solutions@itnetx.be

Customer Opportunity

- Faster innovation and cloud adoption.
- Business agility and flexibility taking advantage of cloud scale and economics.
- Guided program for a solid Azure foundation.
- Expert training for your system engineers.

Our promise to you...

Share our expertise and help with your cloud journey is our mission. Being a partner that accelerates its customers and creates business value for your organization is in our DNA.
